225 East Main St.,
Andover, OH 44003

Winter Grower Meeting 2019

Wednesday, February 13th

Winter Wheat Topdress Program

Dry

150# 46-0-0 w/ Nutrisphere-N

100# 21-0-0-24S

OR

Liquid

30 gallons of 28% N

The Dry Top Dress Option provides 90 units of Nitrogen and 24 units of Sulfur which safeguards against Sulfur deficiency during cool growing conditions. This is an excellent option for early application to promote better tillering.

The Liquid Top Dress Option provides 90 units of Nitrogen and the option of incorporating a herbicide for broadleaf weed control. This is an excellent option for cleaning up winter annuals.

For Maximum Wheat Production consider a program that also includes a fungicide application to reduce the risk of yield and quality robbing diseases.

Ask your Centerra Co-op Agronomy Consultant for Information about Wheat Herbicides and Fungicides
